

TIMOR

Tracing Monsoon, Ocean currents and diagenetic carbon Redistribution

TIMOR MagellanPlus workshop

NEW DATES:

19th – 22nd of May 2022
in **Vienna, Austria**

The TIMOR workshop aims to develop an IODP mission-specific platform (MSP) proposal to study two separate but complementary topics in a single expedition: (1) the early diagenetic redistribution of carbon via the microbially driven oxidation of organic carbon, the dissolution of aragonite and the precipitation of calcite, and (2) the palaeoclimatic and palaeoceanographic impacts of Quaternary Monsoon and Indonesian Throughflow variability in the Timor Sea. We encourage both experienced and early career researchers to join us.
