

21st Century Drilling:

*Building Capacity in the Digital Domain
on scientific ocean drilling
legacy material*

We are excited to announce

**Two linked 5-day MagellanPlus
'21st Century Drilling Workshops'**
at BCR, MARUM, Germany

>>> Workshop 1: 8-12 April 2024 <<<

Workshop 2: mid-late 2024

We will create new records (core descriptions, geochemistry) from digital core and evaluate this data with reassessment of physical cores during two in-person workshops at MARUM using Miocene cores from the South Atlantic. Online syntheses will develop best practices for digital drilling of legacy materials while aiming to advance our understanding of Miocene IRD.

We are looking for experienced scientists and early career researchers to form teams in Core description, Biostratigraphy and Geochemistry/Physical Properties (~10 participants total).

Application deadline for Workshop 1 is 28.01.2024

Some travel support is available for ECORD scientists
